DEFRA (Ref: MO43) For Weather Forecast Planning Issued on Tuesday, 07 September 2021 at 05:19 local time

Air Quality Forecast for the UK

Issued by the Met Office

Today: Moderate levels of air pollution are expected across various parts of England and Wales, due to the warm and sunny conditions. Where winds are light, the built-up of locally emitted pollution may even lead to pockets of High pollution. Largely Low elsewhere.

Tomorrow: Air quality is expected to improve in the southwest of the UK on Wednesday, thanks to increasing winds there. Elsewhere however, the warm and sunny weather will continue to generate areas of Moderate air pollution, locally accompanied by pockets of High pollution.

Outlook: Air pollution levels will generally improve during this period as the weather turns more unsettled and breezy, with Moderate levels becoming confined to Scotland. A complete return to Low levels is expected by Friday or Saturday.
